

## Enterprise Data Protection for Microsoft Exchange Server

In today's highly collaborative world, most communications between your employees, or with your customers and partners are handled via email. In addition, more and more employees are using their email client to store important data and have turned it into a repository of business critical information. These new behaviors have made your email server the most important application in your IT infrastructure and any downtime or data loss can translate into high costs and huge productivity loss for your company. Atempo Time Navigator for Microsoft Exchange offers enterprise class data protection and recovery capabilities for Microsoft Exchange, the world's most commonly deployed email server platform. Whether you are protecting a single Exchange server or a complex clustered configuration, Atempo Time Navigator for Exchange will work in your environment and provide the highest level of protection with fast and easy recovery.

### High Performance & Flexibility

Atempo Time Navigator for Exchange is a highly flexible solution that allows you to choose the most appropriate configuration adapted to your needs and resources. You can back up your server to a direct attached device or through the network and use high-speed disk subsystems or high-speed tape devices as the backup media. Atempo supports all Exchange configurations, from a single server to an advanced clustered deployment. All recent versions of Exchange (2003, 2007 & 2010) are supported.

### Fully Automated & Central Protection

Atempo Time Navigator for Exchange is configured and managed from the Atempo Time Navigator administration console, where you can schedule and monitor the backup activity. This central console allows you to fully automate the data protection activity of your Exchange server and reduce administration and management costs.

### Granular Backup & Recovery

Atempo Time Navigator for Exchange offers simple ways to restore Exchange data and gives easy access to granular objects as necessary. If your Exchange server experiences a major crash, this Atempo module makes it very easy to restore the whole Exchange data set and recover the entire email server in minutes. If you only need to recover a single user mailbox or even a single email, an intuitive wizard can guide your through the necessary steps to locate the object and recover it quickly.

## Key Features and Benefits

Atempo Time Navigator for Microsoft Exchange was developed to specifically address the data protection requirements of Microsoft Exchange Server. It offers a complete set of features that enables full protection of this business critical application server as well as granular recovery of the Exchange objects.

### “Hot” Backup of the Exchange Server

Atempo Time Navigator for Exchange provides hot backup of the Exchange database, so that the backup activity can be accomplished without any impact on the users. All email services remain available during backup operations.

### Granular Recovery

Atempo Time Navigator for Exchange offers granular protection of Exchange objects such as individual user mailboxes or single emails. Thanks to a user-friendly wizard, the administrator can recover a single object for a specific user without affecting his or her productivity.

### High Performance Parallel Backup

Atempo Time Navigator for Exchange has the ability to run parallel backups of the databases, enabling very high throughput and significant performance gain. When backing up the Exchange server to disk, the administrator can benefit from fast backup and recovery and be ensured that the backup windows will be met.

### Plug-in for Outlook

Atempo Time Navigator Outlook Plug-in for Exchange enables users to browse backed up emails and other objects, such as contacts and calendars, and recover these objects directly from their email clients without having to contact the administrator.

### Recovery Storage Group Support

Atempo Time Navigator for Exchange leverages Microsoft Recovery Storage Group features to enable the restoration of a mailbox while the Exchange database is running. It ensures no downtime while the data recovery is taking place and full availability of the Exchange server at any time for the end-users.

### Supported Configurations

#### For Microsoft Exchange Server 2003

- Operating System: Windows 2003
- Key features: Vault backup, Mailbox & public folder protection, CDP, mailbox & mail level recovery

#### For Microsoft Exchange Server 2007
